

CORNELL's ORAL TOPIC LIST:

“Murder Hornets” and honey bees
A closer look at chalkbrood
A history of beekeeping in New York
A Master Beekeeper's critique of the Flow Hive
Actual foraging patterns of bees during crop pollination
Africanized honey bees
Alarm pheromone
Almond pollination in California
Amazing antennae
An in-depth look at juvenile hormone
An up-close look at the corbiculae: Form and function
Antibiotic resistance in beekeeping
Bait hives
Bee aging
Bee bread
Bee flight
Bee sting allergies
Beekeeper health in the bee yard
Beekeeping in the Middle Ages
Beekeeping with stingless bees
Bees can do math!
Bees in folklore
Bees in the Arnot Forest
Behaviors of the giant honey bee (*Apis dorsata*)
Biology of pollination
Black queen cell virus
Brood breaks: Research and guide
Building a successful treatment-free apiary
Can managed bees threaten the health of wild bees?
Causes of queen issues
Chronic bee paralysis virus
Colony collapse disorder
Comparing mite-monitoring strategies
Consumer preferences for buying honey
Crystallized honey: Why it happens and what to do about it
Deformed wing virus
Development during honey bee pupation
Drift behavior
Drone congregation areas: Facts and mysteries
Early beekeeping in Europe
Early beekeeping in the Middle East
Early signs of swarming
Entomophagy: Humans eating bee brood
Enzymes in honey
Evaluating breeder queens

Evolution of the stinger
Fake food: Adulterated honey
Fat body
Floral fidelity
Fungi as medicine for bee viruses
Glyphosate in honey
Grades of sociality
Hemolymph
History of AFB in New York State
Honey bee biology during winter
Honey bee gut microbiome
Honey bee mating
Honey bee probiotics
Honey bee vision
Honey composition and properties
Honey market in the U.S.
Honey packaging for sales
Honeydew honey
How adjuvants in pesticides impact bees
How bees build comb
How bees protect elephants and support African agriculture
How bees use sound/vibration to communicate
How different bee stocks compare in northern climates
How do bees choose who will be the emergency queen?
How do mites develop resistance to miticides?
How fungicides can impact honey bees
How heat impacts honey quality
How hive insulation impacts winter colonies
How honey bees optimize food collection and storage
How pollen supplementation impacts colony growth
How small hive beetles interact with bees in the hive
How the waggle dance was deciphered
How to make creamed honey
How to win a honey show
How Varroa affects deformed wing virus transmission
Hydroxymethylfurfural in honey
Impact of aerial insecticide spraying
Impact of chlorpyrifos on bees
Impact of clothianidin on bees
Impact of imidacloprid on bees
Impact of thiamethoxam on bees
Importation of bees into North America
Insights from the honey bee genome
Is palynology accurate for identifying nectar?
Isle of Wight Disease
Israeli acute paralysis virus

Life of a larva
Management techniques that maximize honey production
Mead in culture and history
Medicinal properties of honey
Memory capabilities of honey bees
Nectar preferences by honey bees
Neonicotinoids in honey
Nestmate recognition
Non-waggle bee dances
Nosema ceranae
Overwintering nucs in northern climates
Parasitic mite syndrome
Pheromones & dance signals of a bivouac of swarming bees
Physiology of “winter” bees
Piping, quacking, and tooting
Planting habitat to improve pollinator communities
Poisonous and hallucinogenic honeys
Pollen digestion in bees
Prehistoric honey hunting
Preventing wax moths in stored equipment
Production of comb honey
Pros and cons of plastic foundation
Queen bee fighting behavior
Raising queens for a small operation
Role of insulation in winter
Skep hive beekeeping
Soil health, plant diversity, and bee floral rewards
Successful wintering practices in my region
The art of bee hunting
The biology of AFB
The biology of EFB
The business of manuka honey
The dark side of dark comb
The diversity of bees in the U.S.
The efficacy of colony spacing as Varroa control
The efficacy of drone comb frames as Varroa control
The efficacy of screened bottom boards as Varroa control
The efficacy of swarming as Varroa control
The efficacy of using oxalic acid when brood is present
The power of citizen science in bee research
The roles of climate change in bumble bee declines
The royal jelly industry in China
The Russian bee breeding program
The Saskatrax breeding program
The squash bee
The top causes of winter loss

The unique Cape honey bee subspecies
Tracheal mites
Tropilaelaps: The next invader?
Using sticky boards to assess colony conditions
Varroa feeding behavior
Viruses and diseases of queen bees
Water foraging by honey bees
What fares better: packages or nucs?
Wintering bees in indoor facilities
Honey bee competition with native bees in urban areas
